6. PRINCIPAL SCIENTIFIC ACTIVITIES AND RESPONSIBILITIES

I am interested in retracing the evolutionary history of organisms. Much of my research focuses on molecular systematics, phylogeny, phylogeography, and population and conservation genetics of animal species inhabiting the eastern Mediterranean region. The majority of my work is based on DNA analysis and I am in a continuous struggle to figure out the extreme diversity of these animals in a temporal and spatial frame. I am mainly question driven rather than organism bound. Thus, I have been working with a variety of invertebrate and vertebrate taxa, ranging from land snails, to isopods, frogs, lizards, birds and mammals. My work has also focused on the development of methods for the retrieval of DNA sequences from archaeological and paleontological remains (ancient DNA),
